Indian Business Expectations & Consumer Sentiment

Financial And Business Conditions In Country In Next 12 Months

Business Conditions - 'Net response' is the difference between the percentage of respondents reporting optimism and those reporting pessimisms. It ranges between -100 and 100. Any value greater than zero indicates expansion/ optimism and values less than zero indicate contraction/ pessimism.

Index consumer sentiments

Consumer Sentiment Indices (Base Sep-Dec 2015 = 100)

Outlook

Key Positives & Risks

POSITIVES

- ✓ India better placed than most to cope with the trade war
- ✓ India's solid relative macro-economic fundamentals
- ✓ High sustainable potential growth rate
- ✓ Robust balance sheets of corporates & banks
- ✓ Likely demand boost from tax concessions, broadening welfare payments and good expected monsoon
- ✓ RBI focused on growth
- ✓ Resilient domestic flows

RISKS

- x Cross border tensions
- x Volatile geopolitics + Trump induced uncertainty
- x Competitive welfarism, compulsion of coalition politics
- x Likely growth deceleration in pockets of infrastructure investments due to altered government priorities
- x Increased supply in response to upturn in equity market

We are likely past the worst in this cycle.

Key Sectoral Positioning

OVERWEIGHT

- ❑ **Consumer Discretionary:** Budget incentives through tax-cuts and improving demand provides attractive risk-reward for the sector
- ❑ **Telecom:** Expected Average Revenue Per User increases may lead to higher accruals in profitability and cashflows
- ❑ **Capital Goods/Industrials:** Significant under-investing in the past in select sub-segment has exacerbated demand-supply imbalance. Pockets of Defense, Power T&D sector look attractive.
- ❑ **Real Estate:** Continuity of robust sales numbers, lower interest rates may help demand ahead

UNDERWEIGHT

- ❑ **Energy:** Weak global demand environment leading to uncertainty in prices
- ❑ **Consumer Staples:** Limited improvement visible in the overall demand scenario. Quick commerce may put pressure on margins.
- ❑ **Information Technology:** Uncertainty in macro environment and currency levels are key risks though valuations have seen correction.

The Fair Value Spectrum- 5 years view

Disclaimer: Past performance may or may not be sustained in future. The Fair Value Spectrum only depicts our Fund House view on the current equity market environment, and should not be construed as any indication of guaranteed returns or future returns. This information alone is not sufficient and should not be used for the development or implementation of an investment strategy. While utmost care has been exercised while preparing the data, the Sponsors/ Asset Management Company/ Trustee Company/ their associates/ any person connected with it, do not warrant the completeness or accuracy of the information and disclaim all liabilities, losses and damages arising out of the use of this information. The recipients of this material should rely on their investigations and take their own professional advice.

Fixed Income Outlook

- ✓ In the recent Monetary Policy committee, Repo rate was reduced by 50 bps to 5.50%, stance was changed back to “neutral” from “accommodative” and CRR rate was reduced by 100 bps to 3.0%,
- ✓ Growth inflation dynamics have turned favorable with lower inflation expectations and GDP growth less than potential. The recent repo rate cut shall aid in holding up growth.
- ✓ Real policy rate is expected to remain positive (Repo Rate@5.5%, Projected inflation at 3.7% for FY26)
- ✓ Fiscal deficit to reduce from 4.8% of GDP last fiscal year to 4.4% this fiscal year (Source: Budget documents); latent demand from Banks, growing demand from insurance and pension funds, higher FII inflows from global bond indices inclusion will further support bond prices
- ✓ The Reserve Bank shall continue liquidity management operations in alignment with the monetary policy stance, ensuring that system liquidity remains sufficient to meet the demands of the productive sectors of the economy.
- ✓ The CRR cut by 100 bps to 3.0%, in four tranches of 25bps each between September and November 2025 will infuse liquidity, aid in rate transmission and support bond markets.
- ✓ Globally other major central bank have already started cutting rates
- ✓ Geopolitical risks, uncertainty from new US administration, global inflation trajectory, extreme weather conditions, fiscal health of states, sustained elevated food prices remain key risks
- ✓ Actual transmission of rates yet to happen. There is scope for further spread compression.
- ✓ Absolute yield levels and spreads seem attractive from a medium to long-term investment horizon. MTM gains to accrue as rates continue to soften and spreads compress over a period of time.

Macro Economic State: In House High Frequency Leading Indicator

- **In House High Frequency Leading Indicator:** While the GDP numbers are released with a lag of 2 months, our inhouse model created based on leading economic indicators provides information on the state and trajectory of domestic economy with a lead time of about 1-2 months
- This tool acts a guiding tool for fixed income investments.

Indian Equity Market Performance- Rolling

Sensex data since inception

Period	Minimum Returns	Average Returns	Standard Deviation	+ve Returns	-ve Returns	Return to Risk Ratio (Average Returns/Standard Deviation)
1 Year Rolling	-56.1%	18.5%	32.0%	73.7%	26.3%	0.58
3 Year Rolling	-18.5%	15.6%	15.5%	89.2%	10.8%	1.01
5 Year Rolling	-7.9%	15.3%	11.7%	92.9%	7.1%	1.30
7 Year Rolling	-7.6%	15.0%	9.0%	94.8%	5.2%	1.65
10 Year Rolling	-2.8%	14.8%	7.1%	99.2%	0.8%	2.08

Longer the investment is held, lesser the probability of negative returns.

Source: Union AMC Internal Research & Bloomberg; Daily rolling returns are calculated for the period 03-04-1979 to 30-05-2025 by the CAGR approach. Example: For 1 Year Return, the first data point will be CAGR between 01-04-1979 to 01-04-1980, similarly the next data point would be CAGR between 02-04-1979 to 02-04-1980. The last data point would be CAGR between 30-05-2024 to 30-05-2025. Returns are calculated in a similar manner for other time frames (3, 5, 7, and 10 Years). The Index used is BSE Sensex. **Past Performance may or may not be sustained in the future.** Index performance does not signify the performance of any schemes of Union Mutual Fund.

What Returns Did Different Asset Classes Give In The Last 20 Years?

Source: CEIC, Bloomberg, IIFL Research; Data as of December 31, 2024

Fixed Deposits = Source: RBI (*top 5 major banks*) and Maturity is 1year deposit.

*Note: The House Price Index as released by RBI on a quarterly basis is used for real estate prices. The data is available from 2010 onwards and the latest available data is for Dec 2024.

Note: Bank Fixed deposits upto Rs. 5 lakhs are being insured by Deposit Insurance and Credit Guarantee Corporation (DICGC).

Past performance may or may not be sustained in future.
